Custom—Custom Services	16

Important note

Service activity is subject to local availability. Each service applies to a single physical site unless otherwise specified. These menu items are also accessible to purchase using credits from HP Foundation Care, HP Proactive Care, HP Datacenter Care, HP Proactive 24 (P24), or HP Critical Service. For initial product installations, use standard Care Pack services.

Server and operating system—All

Service activity	Service description	Standard credits
HP Operating System Patch Analysis (see note 6)	Provides patch analysis, available for HP-UX, HP Multi-Programming Executive (MPE), Tru64 UNIX®, OpenVMS, Linux® OS, and Microsoft® Windows® for one operating system or operating environment instance. For more details on this service, refer to the data sheet .	5
HP Operating System Patch Analysis—10 additional operating system instances (see note 6)	This activity extends the deliverables provided in Operating System Patch Analysis for up to 10 additional operating system instances during the same engagement. For more details on this service, refer to the data sheet .	5
HP System Health Check—direct	Provides a technical assessment to identify potential security, system performance, and availability problems. Covers one HP server. The customer will receive via email a single (one-time) system health check assessment (SHCA) report. For more details on this service, refer to the data sheet .	1
HP System Health Check—onsite	Provides a technical assessment to identify potential security, system performance, and availability problems. Covers one HP server. The customer will receive a single (one-time) SHCA report including an executive summary prepared by an HP consultant. Additionally, the customer will receive one day of onsite advisory consultation, including a review of the findings and recommendations from the SHCA report.	10
HP System Health Check—remote (see note 6)	Provides a technical assessment to identify potential security, system performance, and availability problems. Covers one HP server. The customer will receive via email a single (one-time) SHCA report including an executive summary prepared by an HP consultant, plus a brief phone consultation with HP to review the highlights.	5

Server and operating system—Blades

Service activity	Service description	Standard credits
HP Blade Technology and Toolset Assessment	Assesses the usage of one HP blade enclosure and components, and related HP blade management software, and provides recommendations for improvement.	40
HP Blade Technology Bulletin	Semi-annual bulletin prepared by your account support manager (ASM), providing version and usage advice for the HP software, firmware, and drivers in the customer's HP blade hardware and management software suite.	10
HP BladeSystem Firmware and Driver Update Process Review (see note 6)	This workshop reviews the customer's firmware and driver update strategy, and offers best practices and configuration advice in the use of HP Systems Insight Manager (SIM) and version control in support of that strategy.	10
HP BladeSystem Health Check service	The HP BladeSystem Health Check (BHC) service addresses areas essential to the successful maintenance of a bladed IT environment's availability, performance, and supportability. The service delivers a holistic assessment of the BladeSystem infrastructure, gauging compliance with best practices and highlighting areas of potential risk. Ideally, the BHC should be repeated on a routine basis to measure progress and identify new opportunities for improvement. The service covers up to two blade enclosures. For more details on this service, refer to the data sheet.	20
HP BladeSystem Health Check service for additional enclosures	This service covers one additional blade enclosure during the same engagement at the same location. Use this service for each additional enclosure added to the HP BladeSystem Health Check service customer engagement.	5

Server and operating system—Business critical

Service activity	Service description	Standard credits
HP Cluster Consistency Service	Assessment of one 2–3 node HP-UX cluster to diagnose and identify current threats to application operation or a restart after failover. The diagnostic software will remain installed and continue to monitor changes on the cluster after the assessment is complete. For more details on this service, refer to the data sheet.	30
HP Cluster Consistency Service (additional node)	Extends the Cluster Consistency Service to add one additional HP-UX node. That activity is required as a prerequisite. For more details on this service, refer to the data sheet .	10

Storage—Data privacy

Service activity	Service description	Standard credits
HP Data Sanitization Storage Tier 1 (see note 12)	Performs erasures of a maximum of 220 hard disk drives contained in one or more selected storage arrays in a single erasure process. For more details on this service, refer to the data sheet .	20
HP Data Sanitization Storage Tier 2 (see note 12)	Performs erasures of a maximum of 660 hard disk drives contained in one or more selected storage arrays in up to three erasure processes. For more details on this service, refer to the data sheet .	50
HP Data Sanitization Servers Tier 1 (see note 12)	Performs erasures of a maximum of 256 hard disk drives embedded in or direct attached to up to 25 HP or multi-vendor x86 servers with up to 48 direct attached hard disk drives per server. For more details on this service, refer to the data sheet .	20
HP Data Sanitization Servers Tier 2 (see note 12)	Performs erasures of a maximum of 768 hard disk drives embedded in or direct attached to up to 75 HP or multi-vendor x86 servers with up to 48 direct attached hard disk drives per server. For more details on this service, refer to the data sheet .	50

Storage—Disk backup

Service activity	Service description	Standard credits
HP StoreOnce Backup System Health Check	Proactive review of up to two HP StoreOnce Backup systems for conformance to configuration and usage best practices. Limited performance and capacity recommendations is also provided. For more details on this service, refer to the data sheet .	25

Storage—HP 3PAR

Service activity	Service description	Standard credits
HP 3PAR Adaptive Optimization Policy Implementation	Provides analysis, recommendations, and implementation of HP 3PAR Adaptive Optimization policies, using data collected over time for one HP 3PAR Storage system. Customer must have HP 3PAR System Reporter and Adaptive Optimization properly licensed and operational, and provide a supported database (DB)—MS SQL, MySQL, or Oracle—for use with Adaptive Optimization. Scope limited to a single onsite visit (may be multiple remote follow-ups) and implementation of up to three policies during a single service engagement spanning up to one month.	20
HP 3PAR Health Check	Provides an assessment of the overall health and supportability of one HP 3PAR system. The customer must be using HP 3PAR Service Tools for remote monitoring. For more details on this service, refer to the data sheet .	10
HP 3PAR Rebalance Service	Provides analysis, planning, and implementation to balance I/O across an HP 3PAR array. Includes moving data or physically moving drive magazines within the array. Multiple quantities of this service activity may be required per engagement. For more details on this service, refer to the data sheet .	5

Storage—HP 3PAR, HP XP, or HP P9000

Service activity	Service description	Standard credits
HP Storage Thin Volume Conversion Service (base, per HP 3PAR array)	Provides analysis, recommendations, and conversion of standard to thin provisioned volumes for one HP 3PAR Storage array. Covers up to 16 volumes within a single storage array. The customer must have appropriate HP 3PAR Thin Provisioning software licensed, installed, and operational.	30
HP Storage Thin Volume Conversion Service (base, per HP XP or P9000 array)	Provides analysis, recommendations, and conversion of standard to thin provisioned volumes for one XP or P9000 storage array. Covers up to 16 volumes (excluding Logical Unit Size Extension [LUSE] volumes) within a single storage array. The customer must have appropriate Thin Provisioning software licensed, installed, and operational.	45
HP Storage Thin Volume Conversion Service (extension)	Provides conversion of standard to thin provisioned volumes for an additional 30 virtual volumes (excluding LUSE volumes) on one HP 3PAR or XP or P9000 array. The base service activity for the HP 3PAR or XP or P9000 array is a prerequisite.	30

Storage—HP XP or P9000

Service activity	Service description	Standard credits
HP XP or P9000 Preventative Maintenance Service (New service)	Provides the recommended annual preventative maintenance for one XP or P9000 array. Includes cleaning air filters, checking the battery, and replacing the battery on a scheduled maintenance cycle. The array must be covered under an HP hardware support agreement or higher support level.	5

Storage—HP 3PAR, HP EVA, HP XP, or HP P9000

Service activity	Service description	Standard credits
HP Performance Analysis for HP Disk Arrays	Provides a performance analysis for one HP disk array and recommendations to improve performance. Covers one array of these types: HP 3PAR, EVA, XP, or P9000. For more details on this service, refer to the data sheet .	35
HP Storage Virtual Volume Design and Implementation Service (see note 5, 6)	Design and configuration of a virtual disk (vdisk) or logical unit number (LUN) setup on one storage array to improve capacity utilization or performance. For more details on this service, refer to the data sheet .	30

Storage—EVA

Service activity	Service description	Standard credits
HP EVA Health Check (see note 6)	Compares the configuration of one EVA against best practices for availability, supportability, and performance.	5

Storage—EVA or HP P6000, HP P2000 (MSA), and HP StoreVirtual

Service activity	Service description	Standard credits
HP Storage Array High Availability Technical Assessment	Provides a high-availability evaluation of one HP 3PAR Storage system, HP P6000 (EVA), HP P2000 (MSA) array, or HP StoreVirtual cluster of up to 10 nodes or one HP StoreAll Network Storage server, plus examines support preparedness and the SAN configuration.	30
HP Storage High Availability Technical Evaluation	Provides an analysis for one HP 3PAR Storage system, P6000 (EVA), P2000 (MSA) array, or StoreVirtual cluster of up to 10 nodes or one StoreAll Network Storage server—physical environment, the array's configuration, and its firmware and software versions. Does not include analysis of the SAN or servers connected to the array.	5

Storage—StoreVirtual

Service activity	Service description	Standard credits
HP StoreVirtual Performance and Capacity Assessment (see note 6)	Provides a performance and capacity analysis for one StoreVirtual cluster of up to 10 nodes.	30

Storage—NAS

Service activity	Service description	Standard credits
HP StoreAll Technical and Operational Assistance	Provides assistance with HP X9000 administration, planned configuration changes, and management best practices. Multiple quantities of this activity may be needed, depending on the scope agreed to by the customer and ASM.	10

Storage—SAN

Service activity	Service description	Standard credits
HP SAN Supportability Assessment (see note 6)	HP assesses the supportability of the SAN including multi-vendor SAN infrastructure. Covers SANs connected to up to 30 servers or server blades.	30

Software—Linux

Service activity	Service description	Standard credits
Performance analysis for Linux systems	HP Linux Operating System Service supports the business by gathering detailed OS performance statistics and kernel configuration details using the open source tools <i>collectl</i> and <i>cfg2html</i> . The purpose is to provide a detailed view of the three key components of your system: CPU, (virtual) memory, and the I/O stack. Covers up to three servers.	10

Software—Microsoft

Service activity	Service description	Standard credits
Microsoft Performance Consulting Service (basic package)	For the Windows OS and MS SQL Server this service gathers and analyzes key performance metrics of your business-critical Windows application server in correlation to the MS SQL database business application running on the hardware. Covers up to three servers.	20

Software—SAP

Service activity	Service description	Standard credits
SAP® Performance and Capacity Management Guided Advice	A technical consultant of the SAP performance team will call the customer to hear about system requirements. If necessary, the consultant will log on to the system to double-check. Based on this information, HP will propose the appropriate services to the customer.	30
Coordinated patch management for SAP systems	Provides patch recommendation for the OS based on known issues, fixes, or best practices to enable efficient functioning of SAP software running on top of HP hardware or OS.	5
HP Capacity and Performance Review for SAP Solutions Powered by SAP HANA	This service provides an analysis of the key capacity and performance metrics for SAP solutions powered by SAP HANA over a defined period of time. It detects potential issues or resource shortages and documenting and analyzing the key findings separately for the operating system, the HANA DB, and the SAP application.	20
Performance consulting: Operating system (Windows, HP-UX, Linux)—basic package	Report that covers all important OS metrics like CPU, memory, and I/O.	30
HP Application Performance Standard Meter Service	A Web service providing accurate measurement and automatic analysis of resource consumption measured in SAP Application Performance Standard (SAPS) for any SAP application system including SAP HANA. Measurement can also be performed on other relational data bases used in conjunction with SAP applications. This service enables companies to accurately measure performance in highly dynamic virtualized, consolidated, and cloud-based environments including private, public, and converged cloud environments. Output reports utilize an innovative visual analysis technology. For more details on this service, refer to the data sheet .	35
SAP Performance and Capacity Management Technical Services	A certified technical consultant will perform services of your choice. Customers can select individually from the brochure of the SAP performance team or decide for one of the following preconfigured packages. 1. Trend Analysis Measurement Service (TAMS) 2. Performance consulting 3. Capacity analysis 4. Insight Remote Support (IRS) or SAP SolMan integration 5. Individual selection of services (For example, BWA Health Check and Performance Analysis Service for SAP Systems [PASS])	30
HP Trend Analysis Service for SAP environments	Provides analysis of key capacity and performance figures on SAP, DB, and OS level, and presents evaluation of findings and recommendations in a written report. Supported SAP components are: 1. SAP ERP 2. SAP BW 3. SAP SCM—liveCache 4. Applicable for the Advanced Business Application Programming (ABAP) and the Java stack (EP, XI, CE, BO) The content of the report depends on the respective SAP component or stack. 10 credits are good for one component of any type and one single stack.	10

Service activity	Service description	Standard credits
SAP Solution Manager— HANA integration	This service will be performed for you by a certified technical consultant. The HANA integration into the Solution Manager (SolMan) connects the HANA Database and ensures that technical monitoring is activated, in order to monitor the HANA status and availability. In addition, EWA reports are activated as well.	50
SAP Solution Manager Health Check	The SAP Solution Manager Health Check service helps you to validate your SAP Solution Manager installation to safeguard upcoming investments in order to mitigate rework. Experienced HP consultants will execute multi-dimensional checks inside the SAP Solution Manager. The service provides a detailed overview of the current system state, identifies gaps and actions, and estimates the upgrade effort. It helps moving the solution manager to the correct state prior to solution manager projects. It also gives you important information during the application lifecycle to keep your solution manager in a healthy state during operation.	10

Environment—Big Data

Service activity	Service description	Standard credits
SAP Performance and Capacity Management Guided Advice	A technical consultant of the SAP performance team will call the customer to hear about system requirements. If necessary, the consultant will log on to the system to double-check. Based on this information, HP will propose the appropriate services to the customer.	30

It also gives you important information during the application lifecycle to keep your solution manager in a healthy state during operation.	10

Environment—Cloud

Service activity	Service description	Standard credits
CloudSystem Matrix Expansion Kit Integration Service	This activity provides complete integration and configuration of up to four HP CloudSystem Matrix Expansion Kits into an existing HP CloudSystem environment. For more details on this service, refer to the data sheet.	20
HP CloudSystem Matrix Expert Assistance Service	This service provides customers with five contiguous days (40 work hours) of expert assistance delivered at the customer site by a "Matrix Master," the HP CloudSystem technical expert. The Matrix Master can cover a wide variety of topics as agreed to with the customer, in the form of knowledge transfer, configuration advice, or best practices related to CloudSystem hardware, infrastructure software, and operational issues. For more details on this service, refer to the data sheet.	50
CloudSystem Matrix Upgrade (same Central Management Server hardware) Service	This activity provides current HP CloudSystem Matrix users with an upgrade from an earlier version of CloudSystem Matrix to the current version. The upgrade applies to a single CloudSystem Matrix system, which is retaining the existing Central Management Server hardware. For more details on this service, refer to the data sheet.	35

Service activity	Service description	Standard credits
CloudSystem Matrix Upgrade (change Central Management Server hardware) Service	This activity provides current CloudSystem Matrix users with an upgrade from an earlier version of CloudSystem Matrix to the current version. The upgrade applies to a single CloudSystem Matrix system, which during the update will be migrating to a different Central Management Server hardware. For more details on this service, refer to the data sheet .	55
HP Matrix OE Bursting Activation Service	This service configures a customer's CloudSystem, or standalone HP Matrix Operating Environment (MOE) for ProLiant, for bursting to a single account at a designated cloud service provider (SP). The service provides remotely delivered setup, testing, and demonstration of provisioning calls between the MOE and the service provider, knowledge exchange, and an overview of bursting operations. Prerequisites for this service include: 1. A checklist completed by the customer providing the current configuration of the MOE environment 2. An operational test of the customer's MOE 3. The MOE version as required by the specific SP 4. An SP account setup with networking as needed, customer images uploaded to SP as needed, and assurance that the servers that will be provisioned via bursting can be provisioned via the SP portal	10
HP Security Quick Assessment	HP facilitated workshop, which allows the customer to compare and contrast their security infrastructure, policy, and process against industry best practices.	30
HP Vulnerability scans	HP provides three levels of vulnerability scans: remote perimeter scan, onsite basic scan, or onsite basic wireless scan. Includes one range of 100 IP addresses as applicable.	10

Environment—Delivery management

Service activity	Service description	Standard credits
HP Delivery Planning and Review (see note 6)	Onsite delivery planning and review session to review updates to the Proactive Delivery Plan, discuss trends, observations, and possible risks identified during the delivery of the selected services as well as planned changes. Discuss recommendations for additional activities to address customer needs.	10

Environment—Education

Service activity	Service description	Standard credits
Education credit (see note 7)	Education credits fund customer employee attendance at relevant HP training courses, thus enabling the customer to increase their return from their IT investment. Customers can dedicate a maximum of 25 credits per contract. The PS credits must come from a single contract per redemption—no pooling of credits from multiple contracts. Five credits = one day of classroom training.	25
Education planning assistance	Education planning assistance (EPA) is a brief meeting to identify a customer's specific training needs, and to create a plan outlining how to fulfill these needs (along with timing and costs). The EPA service can be delivered by an ASM, or (based on mutual agreement between the local HP Mission-Critical and HP Education teams) by HP Education Services—or by both teams together.	5
HP Technical On-line Seminars (see note 9)	The HP Technical On-line Seminar (TOS) program delivers 4-hour, virtual, technical seminars for customers who want access to topical, concise information from HP experts. This service provides for registration and attendance of two customer employees.	10
HP Technical On-line Seminar Product Update Brief (see note 9)	The Technical On-line Seminar Product Update Brief (PUB) delivers 2-hour, virtual, technical seminars to HP Proactive Support customers who already know the general technology, but are looking for specific, detailed, technical information on a given subject. It focuses on a specific technical aspect of a product or new version release information. This activity entitles two customers to attend.	5

Environment—Firmware

Service activity	Service description	Standard credits
HP Firmware Update Analysis (see note 10)	Provides a report with the current and recommended firmware and software revisions, including a compatibility analysis with all affected products. Covers selected HP servers, storage, network devices, and converged systems. Use multiple quantities of this service activity, based on the type and number of products to be assessed. Customers may purchase an optional onsite delivery method if they don't allow HP to use remote data collection and analysis tools.	5
HP Firmware Update Implementation (see note 9, 10, 11)	Provides remote or onsite implementation of firmware and software revisions. Covers selected HP servers, storage, and converged systems. Use multiple quantities of this service activity, depending on the type and number of products to be updated.	5

Environment—ITSM

Service activity	Service description	Standard credits
HP ITSM Assessment for Virtualized Environments	An assessment of the customer's management and operational practices for a virtual environment, identifying gaps and challenges, and offering recommendations for improvement in management practices.	30
HP ITSM Quick Assessment	HP-facilitated workshop that allows customers to compare and contrast their IT organization's IT infrastructure and processes against its availability and other business goals. For more details on this service, refer to the data sheet .	30

Environment—Management

Service activity	Service description	Standard credits
Hardware and Software Asset Inventory	In industry-standard environments, it can be difficult to track the many hardware and software assets. Customers' tools and manual methods may not provide complete or detailed results. This service provides a comprehensive review of the HP and non-HP hardware and software installed in a customer's IT environment. This service is designed to discover up to 1,000 devices located at the same site of a customer's environment. The ASM can provide pricing for larger environments with more than 1,000 devices.	35
HP Insight Remote Support Discovery and Activation for Additional Devices (see note 6)	Discovers and activates four HP-UX or OpenVMS servers, ten Windows or Linux servers, or ten storage devices for monitoring by HP Insight Remote Support (IRS).	5
HP Insight Remote Support Discovery and Activation for HP-UX and OpenVMS (see note 6)	Discovers and activates eight HP-UX or OpenVMS servers for monitoring by HP Insight Remote Support.	15
HP Insight Remote Support Discovery and Activation—except for HP-UX and OpenVMS (see note 6)	Discovers and activates eight HP storage devices or HP servers running Windows or Linux for monitoring by HP Insight Remote Support.	5
HP Insight Remote Support configuration and maintenance—updated (see note 6)	This service allows the customers with resource limitations to request assistance from HP to perform various configuration or maintenance activities such as: 1. Installing or validating hosting device prerequisites for successful implementation of the support automation (Insight RS, HP SIM, HP Integrated Lights-Out [iLO], HP Insight Online) solution. 2. Installing or validating managed device prerequisites for successful discovery, event monitoring, and data collection. 3. Maintaining, upgrading, or fine-tuning an existing and functional hosting device solution. 4. Adding or validating new managed devices to an existing and functional support automation solution. <i>Please contact the account manager to further define the scope and credit requirements.</i>	5
HP Remote Specialist Advice	With this service, you can schedule a session with your ASM to discuss a wide range of issues or technical topic areas, for example HP Virtual Connect and HP Virtual Connect Enterprise Manager, HP Insight Control, HP Insight Dynamics, or other available topics as agreed to with the customer. Provides up to four hours of discussion over the phone.	10

Environment—Power and cooling

Service activity	Service description	Standard credits
HP Insight Control Power and Thermal Monitoring	HP Insight Control power management (ICpm) software offers features for monitoring and controlling the power and thermal profile of ProLiant environments. This service helps the customer understand these capabilities and apply them through hands-on experience. This service provides detailed usage for a complete blade enclosure or rack, and general usage for up to two enclosures or racks, within the CA-supported environment. The customer must have the current version of ICpm installed and operational. For complete requirements, refer to the HP Insight Software Support Matrix on hp.com .	40
HP Quick Thermal Assessment (see note 4)	Assesses facility cooling conditions and capacities against industry best practices with recommendations for improvement.	40

Environment—Security

Service activity	Service description	Standard credits
HP Security Quick Assessment	HP-facilitated workshop, which allows the customer to compare and contrast their security infrastructure, policy, and process against industry best practices. For more details on this service, refer to the data sheet .	30
HP Security Review for Virtual Environments	This service provides an assessment of the customer's virtualized infrastructure vulnerability and security practices. Vulnerability is tested by credentialed security scans, which are conducted by certified security specialists from the HP Security and Privacy Professional Services organization. The service covers up to 15 logical servers in the customer's supported environment. The ASM can provide pricing for larger environments. The customer must provide system access for remote vulnerability testing, or optionally pay additional travel costs to obtain onsite service. The ASM will provide the exact service fee upon request.	40
Vulnerability scans	HP provides three levels of vulnerability scans: remote perimeter scan, onsite basic scan, or onsite basic wireless scan. Includes one range of 100 IP addresses as applicable.	10

Environment—Virtualization

Service activity	Service description	Standard credits
HP Availability Analysis for Virtual Environments	This service provides an availability analysis of the customer's virtual environment. HP uses a combination of data collection, interviews with key customer personnel, and a walkthrough of the customer's data center to profile and document the customer's virtualized environment. The service examines key attributes of the customer's hardware, software, management processes, and physical site. Data collection and analysis are performed on up to one populated enclosure, eight standalone servers, or one storage array. Associated SAN switches and the network utilized by that product are covered. The customer must have HP SIM installed with <i>remote data</i> collection enabled.	35
HP Hypervisor Patch Notification	Provides a single patch notification for one selected hypervisor from the following list: VMware® vSphere, Server, or ESXi, or Microsoft Hyper-V. HP will also advise of patching implications for virtual machine (VM) host OS and server firmware patches.	5
HP Health Check Analysis for VMware Virtual Servers (see note 6)	Reviews the customer's virtualized environment; service includes comparison with best practices, recommended patch and firmware levels, configuration attributes, and so on. For more details on this service, refer to the data sheet .	35
HP Insight SW Operational and Performance Review Service	The HP Insight SW Operational and Performance Review Service offers technical and operational guidance to improve the performance and ongoing management of Windows-based HP Insight software managed environments. For more details on this service, refer to the data sheet .	25
HP ITSM Assessment for Virtualized Environments	An assessment of the customer's management and operational practices for a virtual environment, identifying gaps and challenges and offering recommendations for improvement in management practices.	30
Performance and Capacity Analysis for Virtual Environments	This service provides an analysis of virtual infrastructure capacity utilization and performance for virtualized environments and related HP ProLiant servers, storage, and network devices, as well as VMware and Microsoft hypervisors. Data collection and analysis are performed on a customer-identified segment of the customer's environment, consisting of up to one populated enclosure, eight standalone servers, or one storage array. The data collection and analysis are limited to eight ESX hosts part of a cluster; associated SAN switches and the network utilized by that product are covered. For HP EVA, XP, or P9000 storage environments, HP Command View EVAPerf, or HP XP or P9000, HP Performance Advisor must already be installed and configured in the customer's environment. This service does not provide detailed implementation planning or implementation activities. For more details on this service, refer to the data sheet .	40
HP Security Review for Virtual Environments	This service provides an assessment of the customer's virtualized infrastructure vulnerability and security practices. Vulnerability is tested by credentialed security scans, which are conducted by certified security specialists from the HP Security and Privacy Professional Services organization. The service covers up to 15 logical servers in the customer's supported environment. The ASM can provide pricing for larger environments. The customer must provide system access for remote vulnerability testing, or optionally pay additional travel costs to obtain onsite service. The ASM will provide the exact service fee upon request.	40
HP Security Quick Assessment	HP facilitated workshop, which allows the customer to compare and contrast their security infrastructure, policy, and process against industry best practices.	30
HP Virtualization Readiness Workshop for Critical Applications	This service helps the customer investigate and understand the issues involved in virtualizing one critical application. The workshop helps identify key issues, risks, and success factors associated with virtualizing the targeted application. The service addresses the virtualization of one single application instance. Applications covered under this service are enterprise applications such as Microsoft Exchange and Microsoft SharePoint. Please consult your HP account team for more detail.	30

Service activity	Service description	Standard credits
HP Virtual and Physical Technology Review	HP provides a review of the virtual and physical environment. It includes a technical and supportability review of the IT environment, including product-specific compliance to environmental specifications. The environment review and customer interviews identify key areas requiring further attention. The ASM works with the customer to plan how to address these areas using appropriate proactive services.	10
HP Vulnerability scans	HP provides three levels of vulnerability scans: remote perimeter scan, onsite basic scan, or onsite basic wireless scan. Includes one range of 100 IP addresses as applicable.	10

Custom—Custom Services

Service activity	Service description	Standard credits
Custom deliverable (see note 6)	Custom activities	Custom

Notes

1. Standard credits are credits redeemed Monday–Friday during standard HP business hours, excluding HP holidays. Additional credits are required for delivery during non-standard HP business hours.
 2. HP Proactive Select (PS) packages are sold in 10, 30, 60, and 180 credit packages, with additional multiples of 10 credits available.
 3. Prerequisites may be required for some service activities.
 4. Not available in the Americas region.
 5. Please use standard HP Care Pack services for initial product installation.
 6. Enabled for channel co-delivery.
 7. Proactive Select credits may be redeemed for seats in any open enrollment course provided by HP Education. Please contact your local HP Education representative (hp.com/learn/contact) if you desire instead a training course delivered exclusively for your personnel at your own facility. Customers can dedicate a maximum of 25 PS credits per contract. The PS credits must come from a single contract per redemption—no pooling of credits from multiple contracts and redeem up to five days of training. Customers that need more than five days of training or require training for a number of IT professionals should be adding HP Education, SKU HA167AC, on their contract.
 8. Only available in India for the Asia Pacific region.
 9. Not available out of hours.
 10. See HP Firmware Update Services Quote Assist Tool for a supported products list. This tool should be used to estimate the credits needed, based on the type and number of products to be covered.
 11. In the case where the customer decides to not request that HP perform the analysis then the customer is responsible for performing an interoperability analysis prior to this service to reduce version compatibility risks. The customer must provide confirmation that this analysis has occurred and provide a copy of the analysis to HP to determine if it is sufficient for eligibility for this service. HP can provide a firmware interoperability analysis in a separate HP Services engagement for an additional fee, if required.
