

Overview

As businesses are faced with the need to deploy hundreds of servers in a quick and reliable fashion, HP offers the HP Scripting Toolkit (STK) for Windows and HP Scripting Toolkit (STK) for Linux. The Scripting Toolkit (STK) is the new name for the former SmartStart Scripting Toolkit (SSSTK) and this version is specific to Gen 8 servers and beyond. Pre Gen8 SmartStart Scripting Toolkit QuickSpecs and information can be found at: <http://www.hp.com/go/foundation>. Information about the STK for Gen8 and later servers can be found at: www.hp.com/go/ProLiant/STK

The new STK provides all the functionality of the previous SmartStart Scripting Toolkit, plus support for the ProLiant Gen8 servers by providing a flexible way to create standard server configuration scripts for multi-server deployments. Using the former SmartStart technology, now the ProLiant Intelligent Provisioning technology, the Scripting Toolkit (STK) provides a flexible way to create standard server configuration scripts to automate many of the manual steps in the server configuration process.

This automated server configuration process cuts time from each server deployed, making it possible to scale server deployments to high volumes in rapid fashion because the scripts are used to automate many of the manual steps in the server configuration process. This automated server configuration process makes it possible to scale server deployments to high volumes in rapid fashion. The Scripting Toolkit is designed for IT experts with experience in scripting operating system installations and configuring ProLiant server hardware.

The Scripting Toolkit includes a modular set of utilities and important documentation that describe how to apply these new tools to build an automated server deployment process.

New features added to the STK that differentiate it from the previous SSSTK used for pre-Gen 8 servers are:

- HP ROM Configuration Utility (HPRCU) which is an improved version of CONREP to set RBSU settings.
- 32-bit and x64 Windows Toolkits have been combined into a single deliverable
- Linux RPM Package
- All of the ProLiant 100 series Gen 8 servers are supported. (The Scripting Toolkit includes limited ProLiant 100 series support prior to Gen8.)

For the latest features please visit: www.hp.com/go/ProLiant/STK. Previous versions of the Scripting Toolkit (called the SmartStart Scripting Toolkit (SSSTK) is available at: HP Insight Foundation Suite for ProLiant: <http://www.hp.com/go/foundation>.

Models

Ordering Information

Download the Scripting Toolkit from the HP web site at: www.hp.com/go/ProLiant/STK

Product Features

Server Support

The Linux and Microsoft® Windows® editions of the HP Scripting Toolkit provide a collection of tools that assist with configuring HP ProLiant server hardware and installing your operating system.

Key Features

- Utilizes proven technology to provide a consistent and reliable server configuration
- Replication Utilities - Provide an easy way to create and apply server hardware, array, and iLO configuration script files
- Configuration Files - Provide a flexible way to edit standard hardware configuration files.
- Scripting - Enables the IT administrator to script server configuration files and link to the unattended installation tools of the operating system

Advantages

- Extends leadership for enterprises looking for fast and effective server deployment
- Lowers server deployment cost
- Scales to support high volume server deployment
- Provides easy to understand documentation with how-to information and sample scripts
- Builds automated server deployment solution

Benefits

- "Rack and Go" unattended installation frees up scarce IT resources
- Scales to support high volume server deployments lowering cost/server as more are deployed
- Delivers consistent server configurations across multiple servers
- Integrates into popular methods for operating system deployment
- User guide provides valuable examples on how to build scripts for high volume server deployment

Operating Systems and Virtualization Software Support for ProLiant Servers

Microsoft Windows Server
Microsoft Windows Server Hyper-V
Red Hat Enterprise Linux (RHEL)
SUSE Linux Enterprise Server (SLES)
Oracle Enterprise Linux (OEL)
Solaris
NetWare
VMware
Citrix XenServer

NOTE: For more information on HP's Certified and Supported ProLiant Servers for OS and Virtualization Software and latest listing of software drivers available for your server, please visit our Support Matrix at: <http://www.hp.com/go/ossupport>. Microsoft Windows Server support includes support for multiple Windows OSes (Windows R2, Windows 2008, Windows SBS, etc) and the support matrixes show specific OSes for specific servers supported.

Rack and Go Deployment By combining scripts for server configuration and operating system installation, IT administrators can rapidly configure a new server and install the operating system in a hands-off unattended manner.

Product Features

Virtual Presence Server Deployment Integrated Lights Out (iLO) and the Scripting Toolkit are key components of HP's management strategy to deliver "Virtual Presence" -controlling your IT assets anywhere on the network. iLO provides powerful remote access to your server. Using the "Virtual Media" feature, system administrators can remotely power on a new server, boot up from the network boot image, run the server configuration scripts and launch the OS installation across the network, providing an efficient way to deploy new servers at remote locations without local IT staff.

Insight Control rapid deployment capability The Scripting Toolkit is included in Insight Control rapid deployment. With the Scripting Toolkit providing the technology to script server deployments, HP has extended our offerings for multi-server deployment tools with Insight Control rapid deployment. For more information, visit: <http://www.hp.com/go/rdp>.

Tools and Utilities The section below describes the various tools and utilities included in the HP Scripting Toolkit (STK) for Windows and HP Scripting Toolkit (STK) for Linux.

- BOOTEXTRACT
- CONREP
- HPRCU
- HPACUSCRIPTING
- HPDISCOVERY
- HPONCFG HPLPCFG
- HPQLAREP
- HWQUERY
- IFHW
- LO100CFG
- REBOOT
- RBSURESET
- SETBOOTORDER
- STATEMGR

NOTE: HP ProLiant 100 G7 series servers and earlier generations do not support all Scripting Toolkit commands. Commands that are supported might not work as expected. For a better understanding, please read each section of the Windows and Linux User Guides carefully.

BOOTEXTRACT The BOOTEXTRACT utility captures NTLDR and windows boot sectors

CONREP The Configuration Replication Utility (CONREP) can be used to capture or replicate server configuration settings, but basically it configures system BIOS settings. This utility works across all ProLiant servers but certain requirements exist for ProLiant 100 series servers, please refer to user manuals.

HPACUSCRIPTING Starting with version 8.28.13.0, ACU Scripting is now a standalone application that is distributed with the ACU CLI application. In ACU versions prior to 8.28.13.0, the scripting executable was provided with the ACU GUI component. Users familiar with the previous versions of ACU Scripting must now install the ACU CLI application to obtain the scripting executable. The new ACU scripting executable (hpacuscripting) replaces the former executable (cpqacuxe) in all scripts.

Product Features

HPDISCOVERY	HPDISCOVERY provides an inventory of the server being configured and must run on each deployed server.
HPONCFG	The HP On Configuration (HPONCFG) utility is an online configuration tool used to setup and reconfigure iLO, iLO 2, iLO 3, and iLO 4 without requiring a reboot of the server operating system. The utility runs in a command line mode and must be executed from an operating system command line.
HPRCU	HP ROM Configuration Utility is an improved version of CONREP to set RBSU settings and works with ProLiant Gen8 servers only.
HPLPCFG	The HPLPCFG utility discovers the WWID of the HBA in the server blade and writes the information in the text file. The text file presents the options in human readable format. The HPLPCFG utility updates the hardware with the boot volume WWID and boot LUN read from the text file.
HPQLARP	The hpqlarep utility updates the hardware with the boot volume WWID and boot LUN read from the text file.
HWQUERY	The Hardware Query Utility (HWQUERY) is used with output of HPDISCOVERY. HWQUERY files can be used to gather data from the hardware discovery file to set or define environment variables
IFHW	The IF Hardware Utility (IFHW) is used with output of HPDISCOVERY and can be used to query the output file of HPDISCOVERY, enabling you to add conditional tests to a script so that it performs different operations based on the outcome of the tests.
LO100CFG	The LO100CFG is a tool for Onboard Administrator Powered by Lights-Out 100i and the LO100i Advanced Licenses. LO100CFG enables you to configure Lights-Out 100 on the ProLiant 100 series servers similar to HPONCFG for other ProLiant servers. Note: Utility only supports HP ProLiant 100 G7s and earlier generation servers.
RBSURESET	The RRSU Reset (RBSURESET) utility resets the BIOS settings for a server by reapplying the default factory setting at the next reboot. RBSURESET does not erase array configurations or logical storage volumes.
REBOOT	The REBOOT utility enables the user to reboot the server, controlling which device is the boot device. In conjunction with other utilities, the REBOOT utility controls server reboots from a batch file.
SETBOOTORDER	The SETBOOTORDER utility enables you to set the order in which devices are booted, including diskette drives, CD-ROM drives, hard drives, PXE, and USB devices. This utility sets the boot order only for devices that exist for a server and can be set to boot in any order. SETBOOTORDER cannot be used to set the storage controller order. This utility can only set one boot device on ProLiant100 series servers. Note: Utility has limited functionality for HP ProLiant 100 G7 and earlier generation servers.

Product Features

STATEMGR

STATEMGR Keeps track of the execution state during system reboots and saves persistent state information across reboots of the system. Note: Utility is not supported on 100 G7 series servers and earlier generations

Register and Download

Scripting Toolkit is available at no cost after filling in a simple registration form located at:

- www.hp.com/go/ProLiant/STK for Gen8 ProLiant servers and
- www.hp.com/servers/sstoolkit or <http://www.hp.com/go/foundation> for pre-Gen 8 servers

Service and Support

Service and Support

HP Technology Services

HP Technology Services offers you consultants and support experts to solve your most complex infrastructure problems. We help keep your business running, boost availability and avoid downtime.

Protect your business beyond warranty with HP Care Pack Services

When you buy HP Options, it's also a good time to think about what level of service you may need. HP Care Pack services provide total care and support expertise with committed response choices designed to meet your IT and business need.

HP Foundation Care services deliver scalable support-packages for HP industry-standard servers and software. You can choose the type and level of service that is most suitable for your business needs. New to this portfolio is HP Collaborative Support. If you are running business critical environments, HP offers Proactive Care or Critical Advantage. These services help you deliver high levels of application availability through proactive service management and advanced technical response.

Here is the support service recommendation from the Foundation Care and Proactive Care portfolio. For customized support service solution, HP can work with you to tailor a service solution for your unique support requirements using broader services portfolio of Foundation Care and Proactive Care.

Recommended Services

Recommended HP Care Pack Services for optimal satisfaction with your HP product

3-Year HP 24x7 4 hour Response, Hardware Support Onsite Service

Provides you with rapid remote support and if required an HP authorized representative who will arrive on site any time and day of the year to begin hardware maintenance service within 4 hours of the service request being logged.

<http://h20195.www2.hp.com/V2/GetPDF.aspx/5982-6547EEE.pdf>

3-Year HP 24x7 4 hour Response, HP Collaborative Support

Offers customers a single point of contact for server problem diagnosis, hardware problem resolution, and basic software problem diagnosis, fault isolation, and resolution if available to HP. If the problem is with HP HW, the representative will arrive on site any time and day of the year to begin hardware maintenance service within 4 hours of the service request being logged. In case, the issue is with HP or supported third-party software product and cannot be resolved by applying known fixes, HP will contact the third-party vendor and create a problem incident on your behalf.

HP ProLiant Server Hardware Installation

Provides for the basic hardware installation of HP branded servers, storage devices and networking options to assist you in bringing your new hardware into operation in a timely and professional manner.

Service and Support

Related Services

Related HP Care Pack Services to enhance your HP product experience

3-Year HP 24x7 4 hour Response, Proactive Care or Critical Advantage

Helps optimize your systems and delivers high levels of application availability through proactive service management and advanced technical response. A skilled Technical Manager will own your query or issue end to end until resolved, delivering a single point of contact for you.

<http://h20195.www2.hp.com/V2/GetPDF.aspx/4AA3-2140ENW.pdf>

3-Year HP 6-hour Onsite Call-to-Repair, HP Collaborative Support

Offers customers a single point of contact for server problem diagnosis, hardware problem resolution to return the hardware in operating condition within 6 hours of the initial service request to the HP Global Solution Center, and basic software problem diagnosis, fault isolation, and resolution if available to HP. In case, the issue is with HP or supported third-party software product and cannot be resolved by applying known fixes, HP will contact the third-party vendor and create a problem incident on your behalf.

HP Proactive Select Service

Provides a flexible way to purchase HP best-in-class consultancy and technical services. You can buy Proactive Select Service Credits when you purchase your hardware and then use the credits over the next 12 months.
